## **Personal Statement**

I have always been fascinated by people and the way they behave, but it is only as I have grown older and become more aware about psychiatry I started to investigate the more mysterious aspects of the human mind, and learned the ways the mind and brain can act unpredictably especially during time of stress.

I was fascinated by the complex psychopathologies of mental illness and motivated to understand the anatomical biological basis of psychiatric disorders as well as studying different treatment modalities .In fact everyone struggles at one point in their lives and we as psychiatrist having the chance to help someone is so valuable and admirable .

I am Hard-working with a high level of commitment towards my work , can efficiently work under pressure and have the ability to demonstrate resilience difficult circumstances.

I am enthusiastic about learning as much as I can from my seniors and collages to improve my skills throughout my career. I am Committed to working effectively within the multi-disciplinary team and Can effectively facilitate communication within the team members ,Meanwhile have the ability to take independent and safe decisions when needed with the ability to take responsibility for my actions.
